

Kurzweil 3000 (Win) v.10.x

Scanning Print Materials

Suggested Activities

Once you have completed the tutorial, try these activities to practice scanning print materials...

1. Ensure that you have scanner drivers installed on your computer and that Kurzweil 3000 recognizes your scanner before proceeding with these activities.
2. Set up the scanner options to suit the textual material you will be scanning. Select a book and worksheet to scan.
3. Scan a single page. Adjust the scanning settings as needed to get the best possible scan.
4. Set the scan repeatedly feature and scan several pages in the book.
5. Join the two files you've created together into one file.
6. Delete one or more pages from your scanned document. Delete the last half of your document (hint: save a different page range).
7. Save your documents as .kes files.
8. Review the Canadian copyright information in the tutorial to ensure you understand under what circumstances you can scan books or print materials.
