AirDrop Filesharing for iOS

Introduction
AirDrop is a powerful image and note sharing tool for iDevices (iPads, iPods, and iPhones). Airdrop does not require e-mail accounts, or for devices to be on the same wireless network, as it uses Bluetooth connectivity for inter-device communication.

Learning Objectives (Calibri 14pt bold)
Completion of this tutorial will give you experience with the following:

• Activating AirDrop on iOS devices
• Transferring photos or notes from one iOS mobile device to another

This tutorial assumes
• You have an iDevice running iOS v.7 or later
• You have images

Implementation Scenario
Ms. Derban teaches grade 4 in a rural elementary school. Her students regularly use the cameras on their class iPads to document their learning and on field trips. Each Friday, Ms. Derban asks her students to browse the photos on the iPads and share the ones that best represent the week’s activities with her for publishing in a class newsletter. AirDrop is a reliable option for this task, as the wifi in the school is intermittent, and e-mail is not set up on the student iPads.

<tbody>
<tr>
<td>1</td>
<td>To access the Control Centre, <strong>swipe up from the bottom of the iDevice</strong> screen.</td>
</tr>
</tbody>
</table>
| 2 | Once the Control Centre is visible, **click on Airdrop** to reveal a pop-up menu.  
From the pop-up menu, **select Everyone**. (Repeat this process on the device you wish to share files to.) |
| 3 | **Open the Photos or Notes app** and look for the **Send icon**. |
| 4 | After the **Send icon** is clicked, an options screen will appear. **Choose your intended recipient** from the “Tap to share with Airdrop”.  
Note: you also have the option to send the image or note in a to a variety of sources in a variety of ways. |
| 5 | Once you select your recipient, it will display “Waiting...” until the recipient accepts the image or note. Once the recipient accepts the transfer, it will be marked as “Sent”. (recipient’s screen) |
